FAKULTAS ILMU KOMPUTER
UNIVERSITAS JEMBER

2026

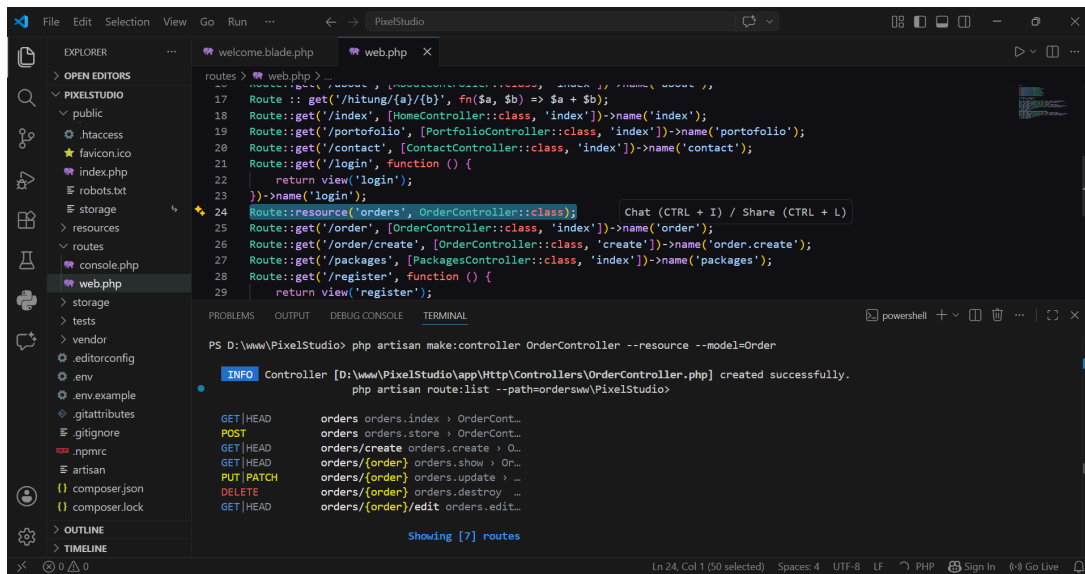

AKTIVITAS MANDIRI 5

1. Buat Resource Controller: `php artisan make:controller OrderController --resource --model=Order`

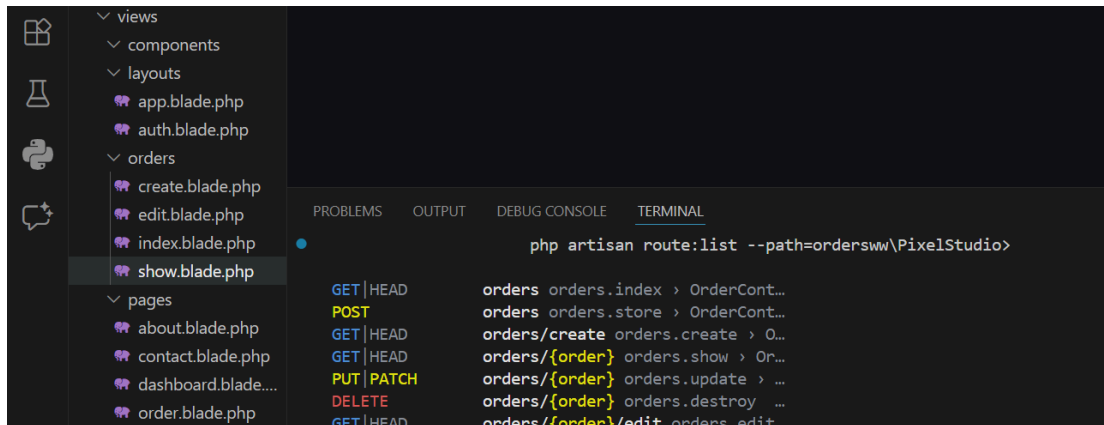

The screenshot shows the PixelStudio IDE interface. The Explorer panel on the left displays the project structure, with the file `OrderController.php` selected under the `Http/Controllers` directory. The main editor displays the code for `OrderController.php`, which includes the namespace `App\Http\Controllers`, the use of `App\Models\Order` and `Illuminate\Http\Request`, and the definition of the `OrderController` class extending `Controller`. The class contains two methods: `index()` and `create()`. The terminal at the bottom shows the command `PS D:\www\PixelStudio> php artisan make:controller OrderController --resource --model=Order` and the output `Controller [D:\www\PixelStudio\app\Http\Controllers\OrderController.php] created successfully.`

2. Daftarkan di routes/web.php: `Route::resource('orders', OrderController::class)`

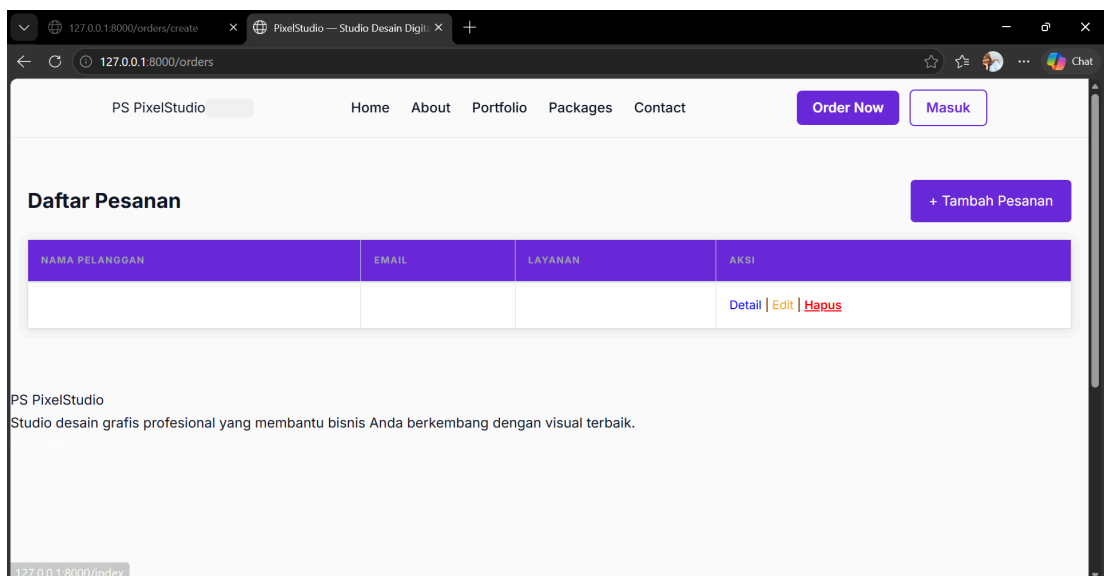

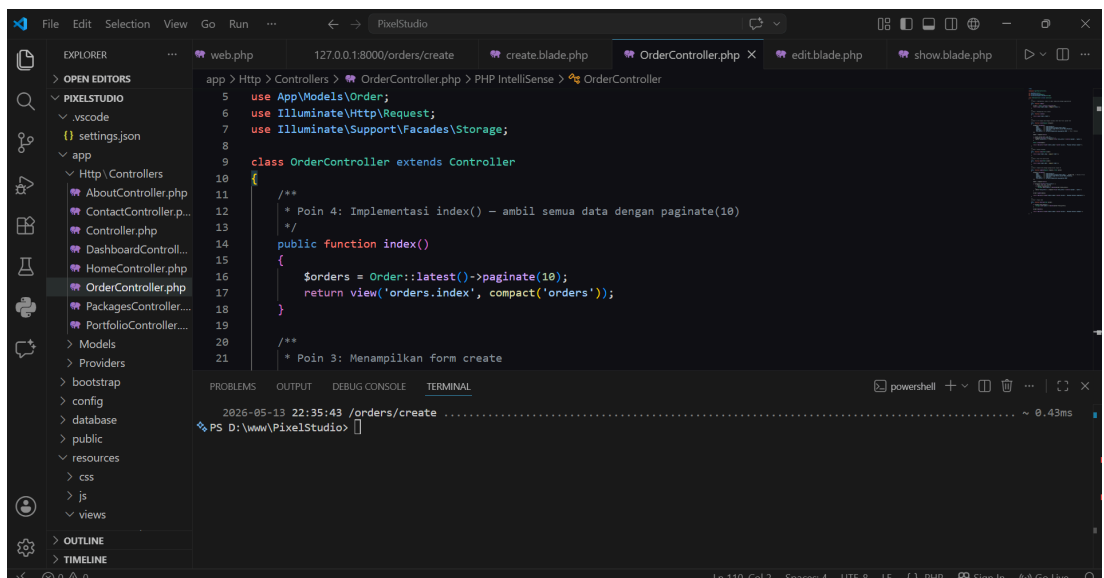

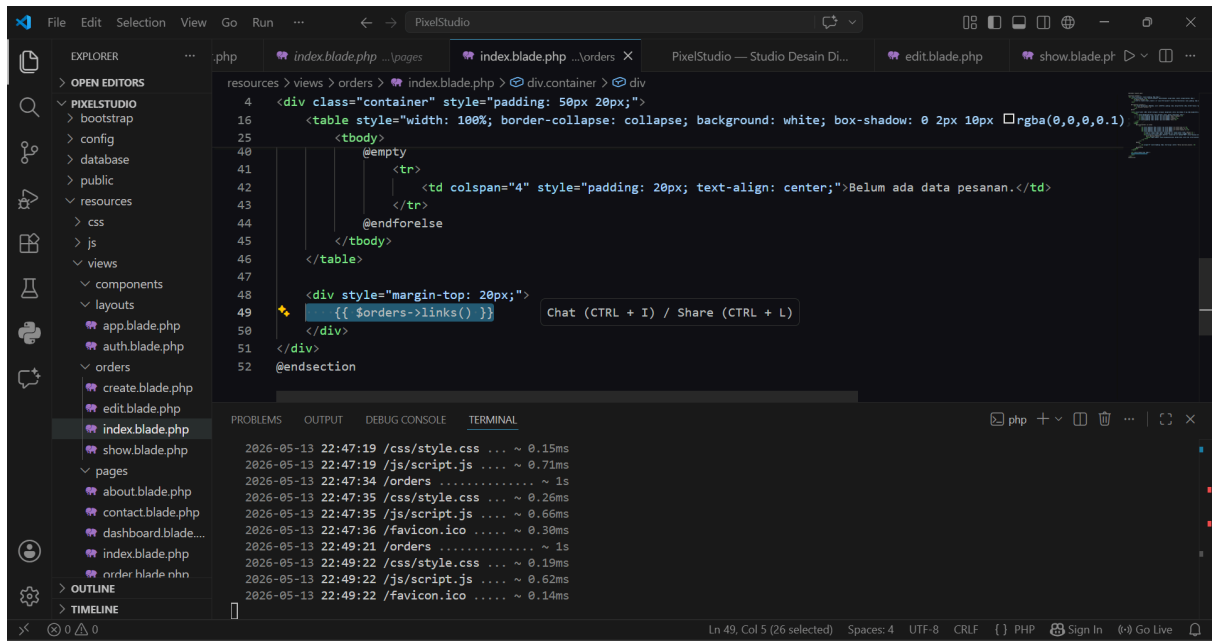

The screenshot shows the PixelStudio IDE interface. The Explorer panel on the left displays the project structure, with the file `web.php` selected under the `routes` directory. The main editor displays the code for `web.php`, which includes the registration of the `OrderController` as a resource route: `Route::resource('orders', OrderController::class)`. The terminal at the bottom shows the command `PS D:\www\PixelStudio> php artisan make:controller OrderController --resource --model=Order` and the output `Controller [D:\www\PixelStudio\app\Http\Controllers\OrderController.php] created successfully.` Below the command, the terminal displays the output of `php artisan route:list --path=orders`, showing the routes for the `orders` resource.

3. Buat semua view: `orders/index.blade.php` (tabel + pagination), `create.blade.php` (form), `edit.blade.php` (form pre-filled), `show.blade.php` (detail)

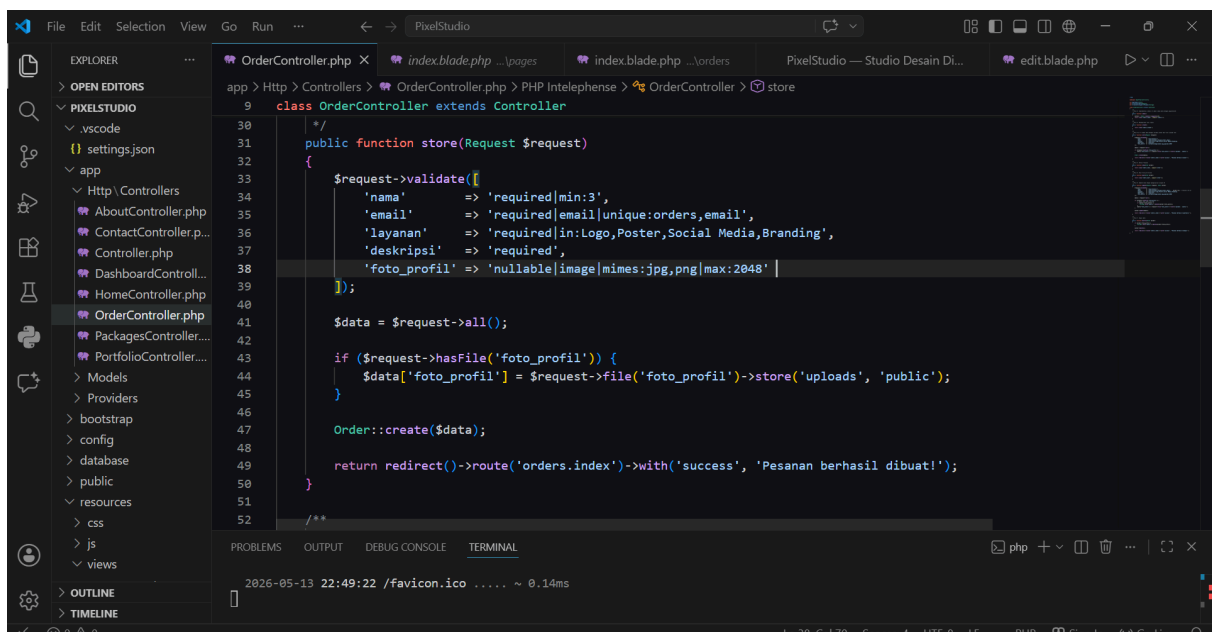

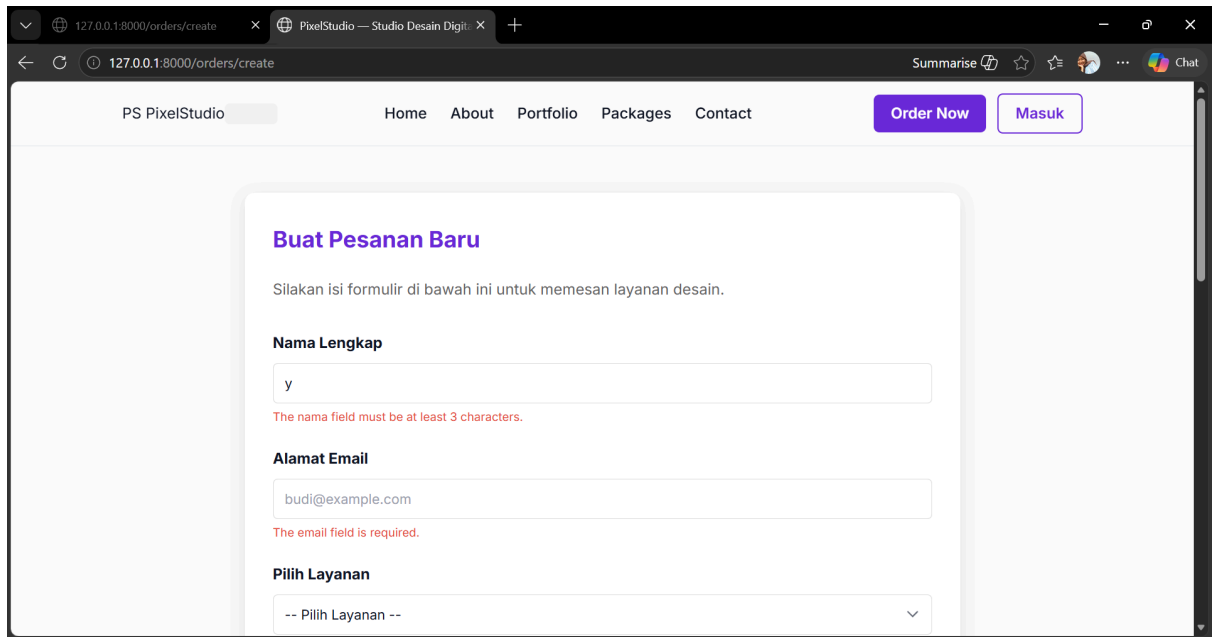

- Implementasi method `index()` — ambil semua mahasiswa dengan `paginate(10)` dan tampilkan ke view

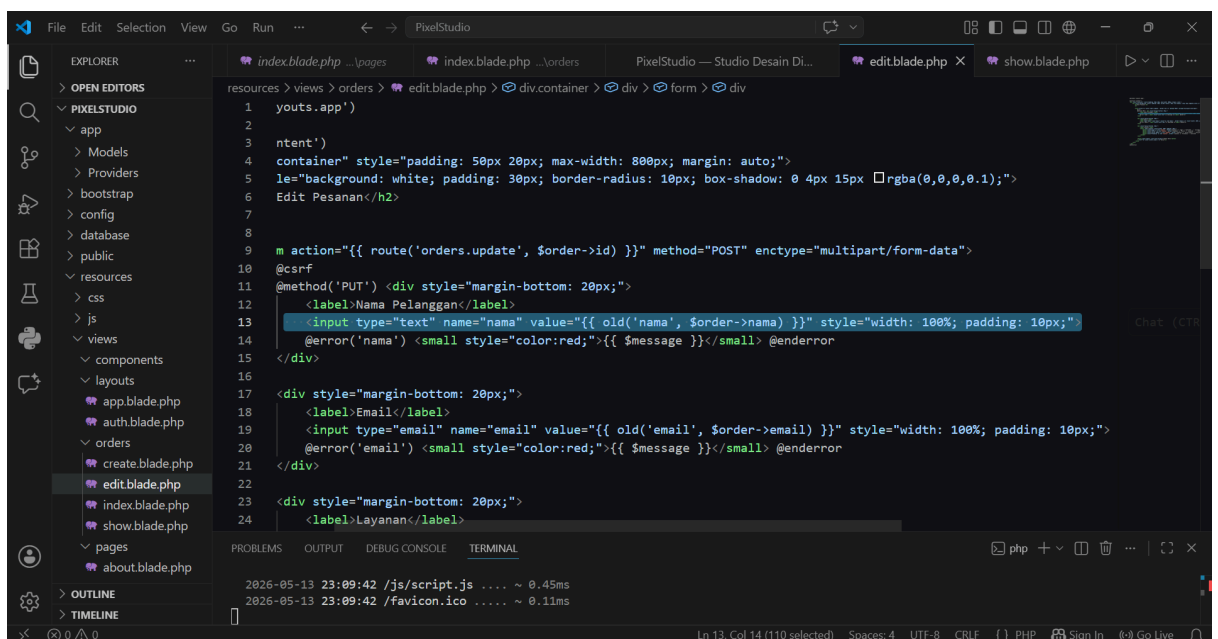

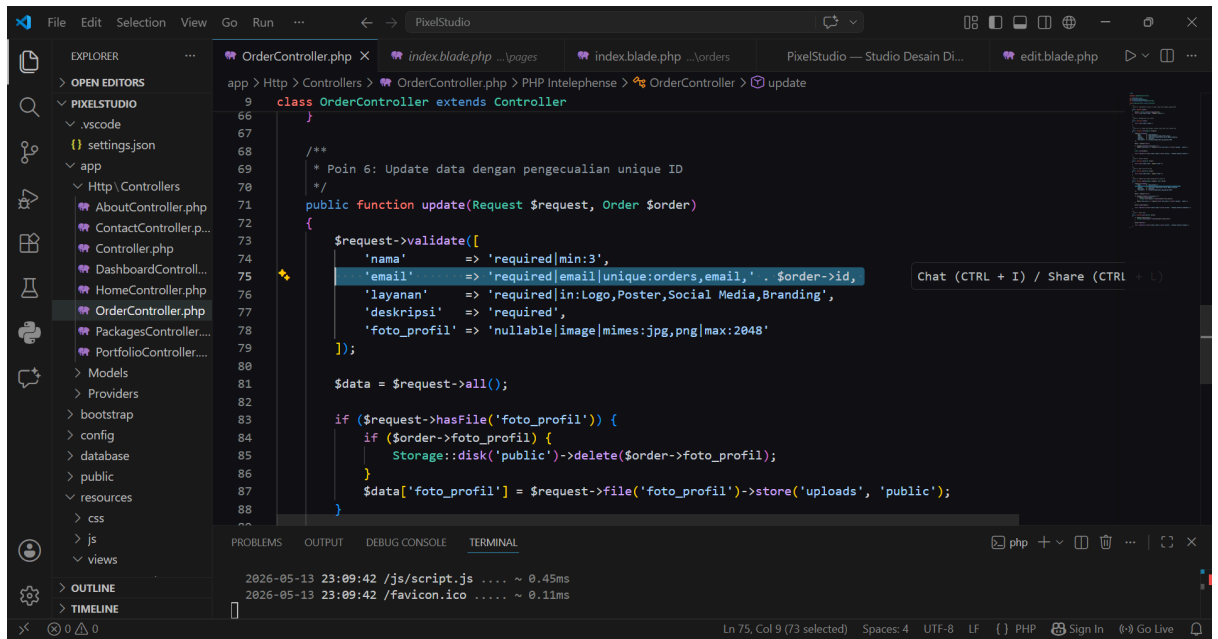

- Implementasi create() dan store() — dengan validasi, nama (min:3), email (email|unique), layanan (In: Logo, Poster, Social Media, Branding)

6. Implementasi edit() dan update() — tampilkan form dengan old() atau \$order->field, validasi unique kecuali ID ini

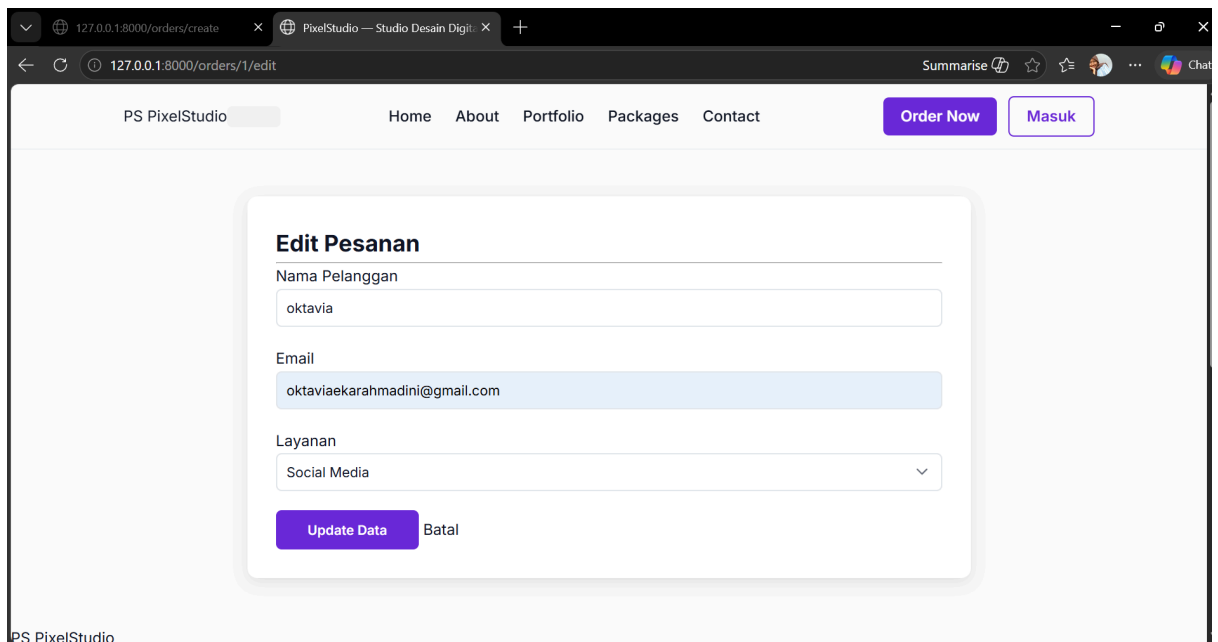

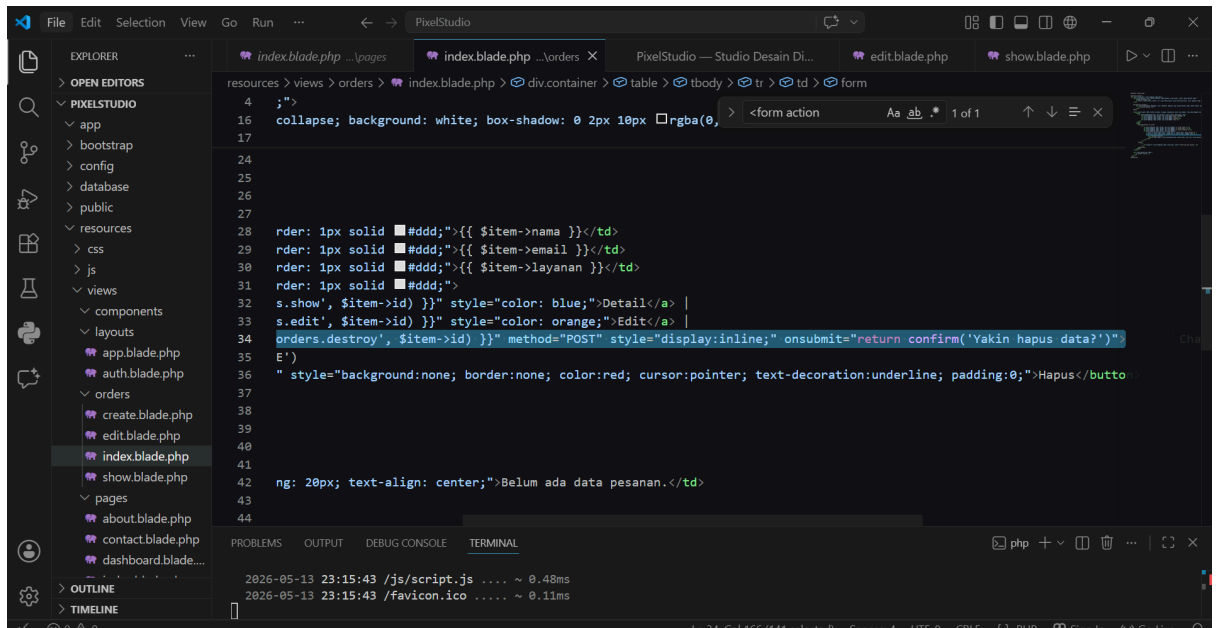

```
class OrderController extends Controller
{
    /**
     * Poin 6: Update data dengan pengecualian unique ID
     */
    public function update(Request $request, Order $order)
    {
        $request->validate([
            'nama' => 'required|min:3',
            'email' => 'required|email|unique:orders,email,' . $order->id,
            'layanan' => 'required|in:Logo,Poster,Social Media,Branding',
            'deskripsi' => 'required',
            'foto_profil' => 'nullable|image|mimes:jpg,png|max:2048'
        ]);

        $data = $request->all();

        if ($request->hasFile('foto_profil')) {
            if ($order->foto_profil) {
                Storage::disk('public')->delete($order->foto_profil);
            }
            $data['foto_profil'] = $request->file('foto_profil')->store('uploads', 'public');
        }
    }
}
```

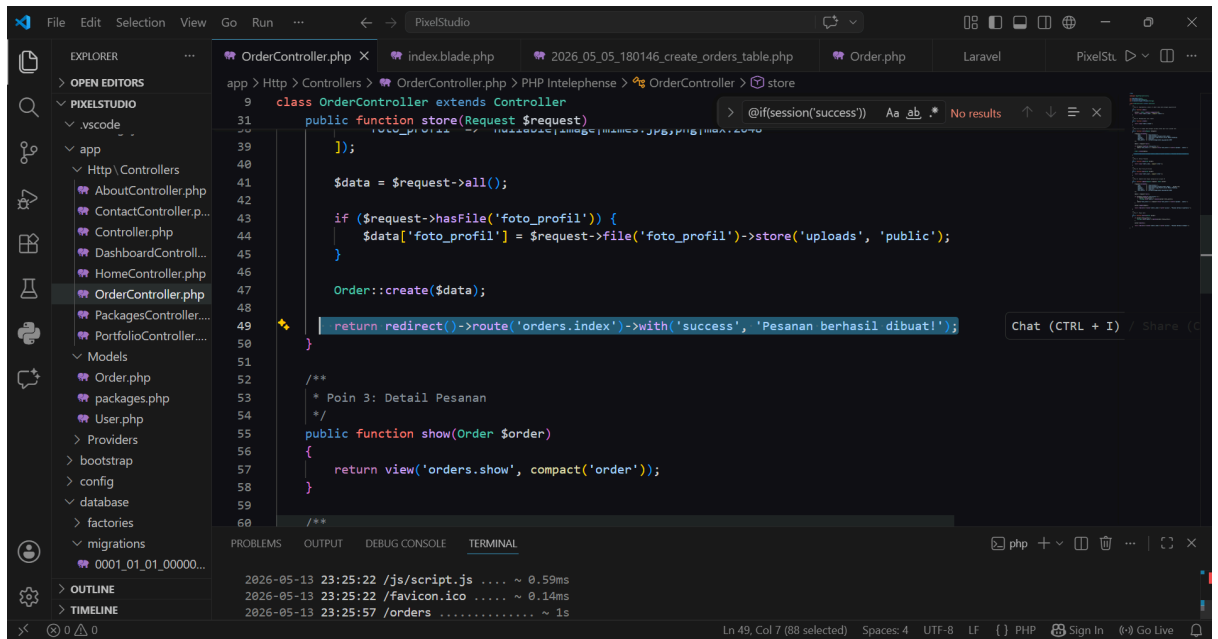

- Implementasi `destroy()` — dengan konfirmasi JavaScript sebelum hapus

```
resources > views > orders > index.blade.php > div.container > table > tbody > tr > td > form

38
39
40
41
42 ng: 20px; text-align: center;">Belum ada data pesanan.</td>
43
44
```

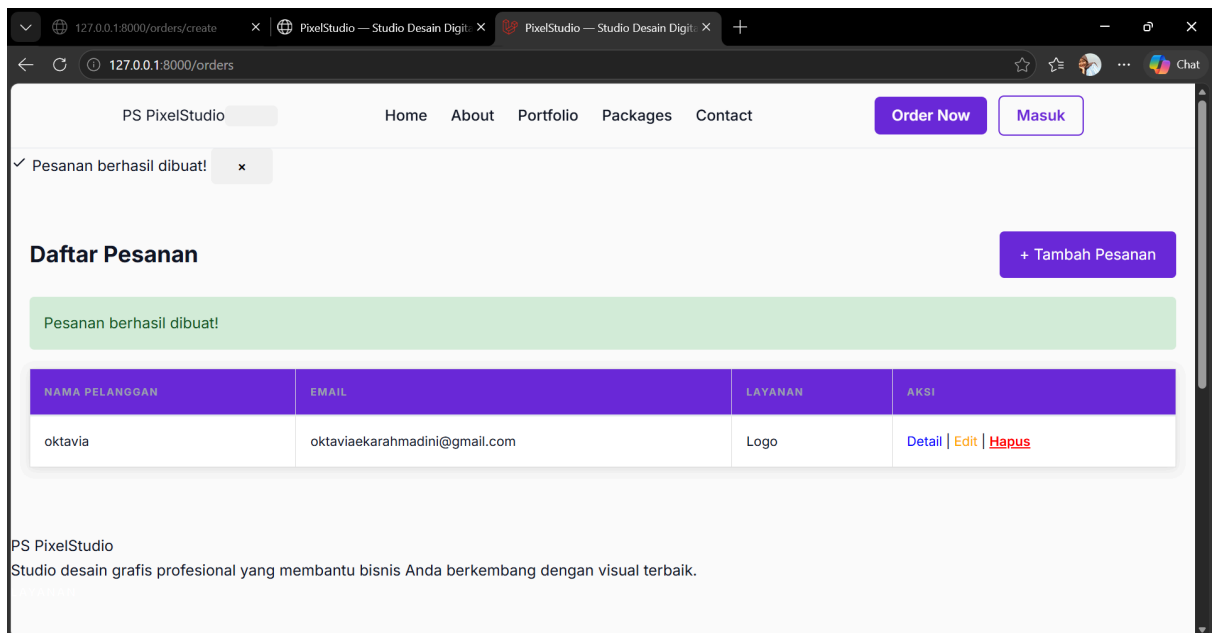

8. Tambahkan flash message di layout dan tampilkan session('success') / session('error')

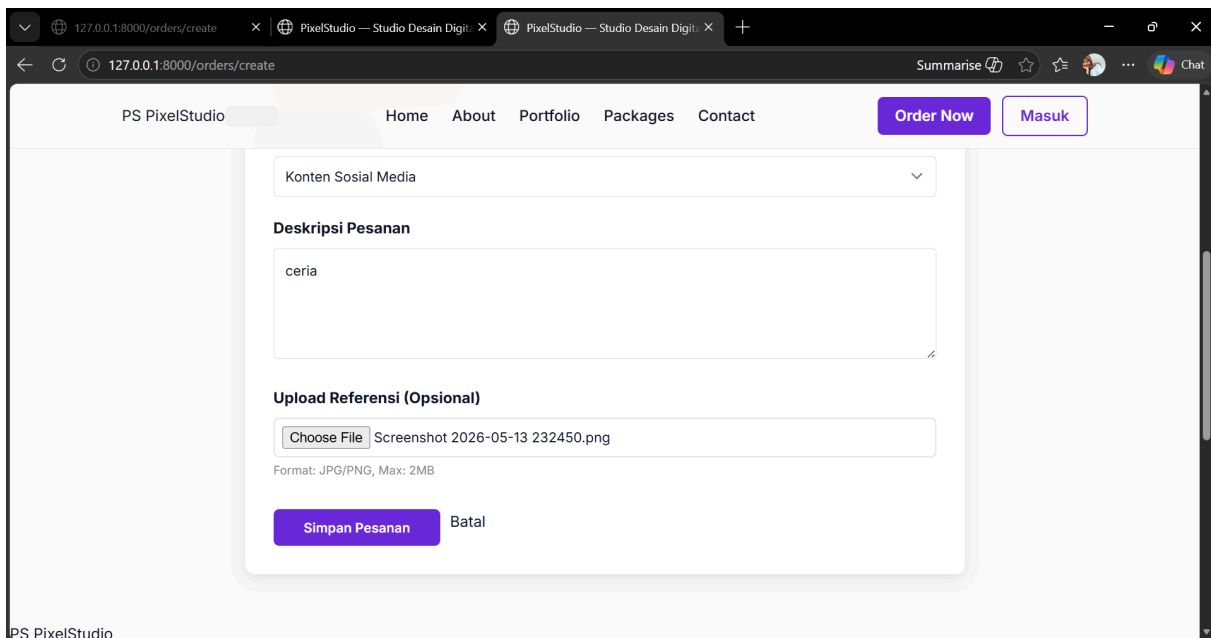

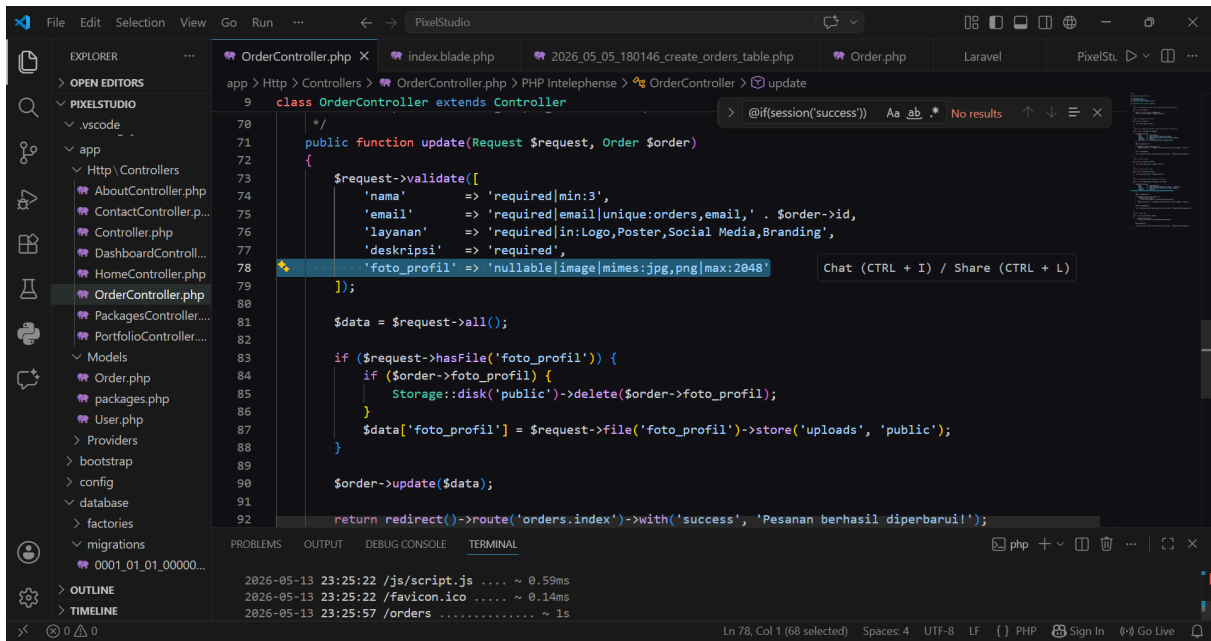

```
app > Http > Controllers > OrderController.php > PHP Intelephense > OrderController > store
9 class OrderController extends Controller
10 {
39 }
40
41 $data = $request->all();
42
43 if ($request->hasFile('foto_profil')) {
44     $data['foto_profil'] = $request->file('foto_profil')->store('uploads', 'public');
45 }
46
47 Order::create($data);
48
49 return redirect()->route('orders.index')->with('success', 'Pesanan berhasil dibuat!');
50 }
51
52 /**
53  * Poin 3: Detail Pesanan
54  */
55 public function show(Order $order)
56 {
57     return view('orders.show', compact('order'));
58 }
59
60 /**
```

2026-05-13 23:25:22 /js/script.js ~ 0.59ms
2026-05-13 23:25:22 /favicon.ico ~ 0.14ms
2026-05-13 23:25:57 /orders ~ 1s

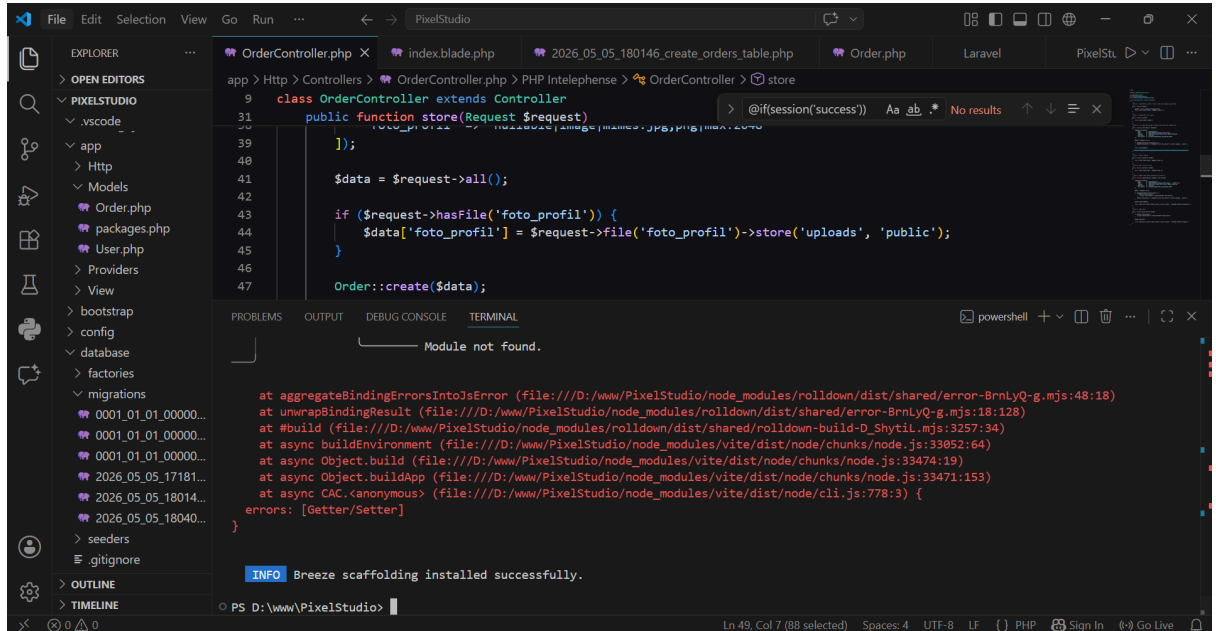

9. BONUS: Tambahkan fitur upload foto profil dengan validasi image|mimes:jpg,png|max:2048

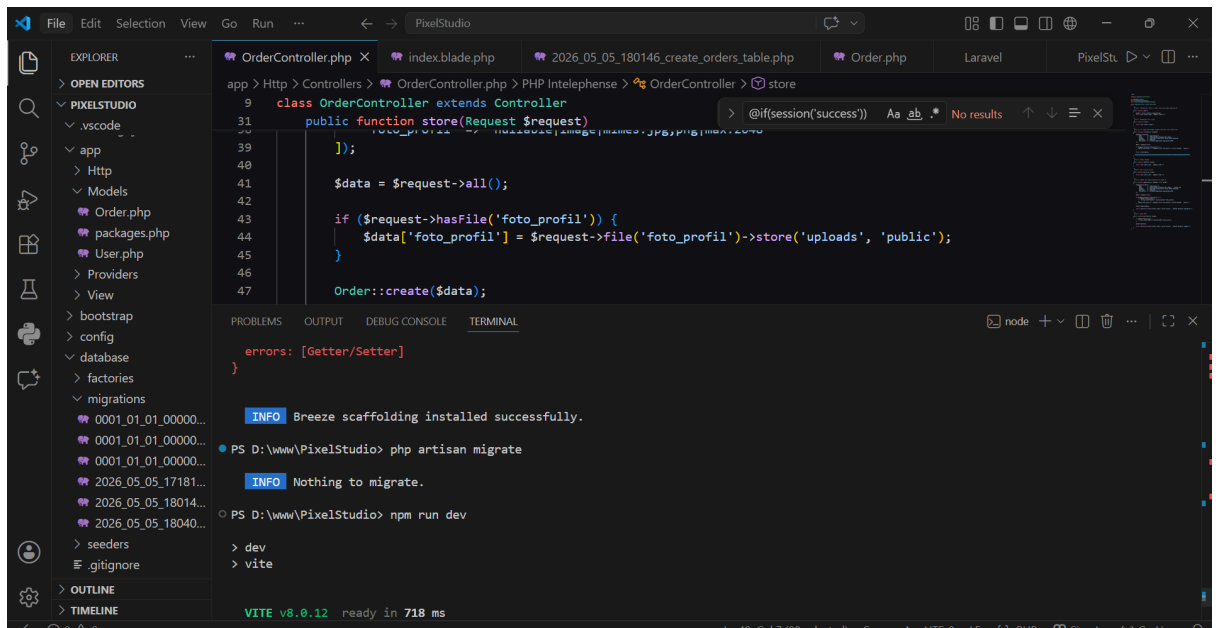

AKTIVITAS MANDIRI 6

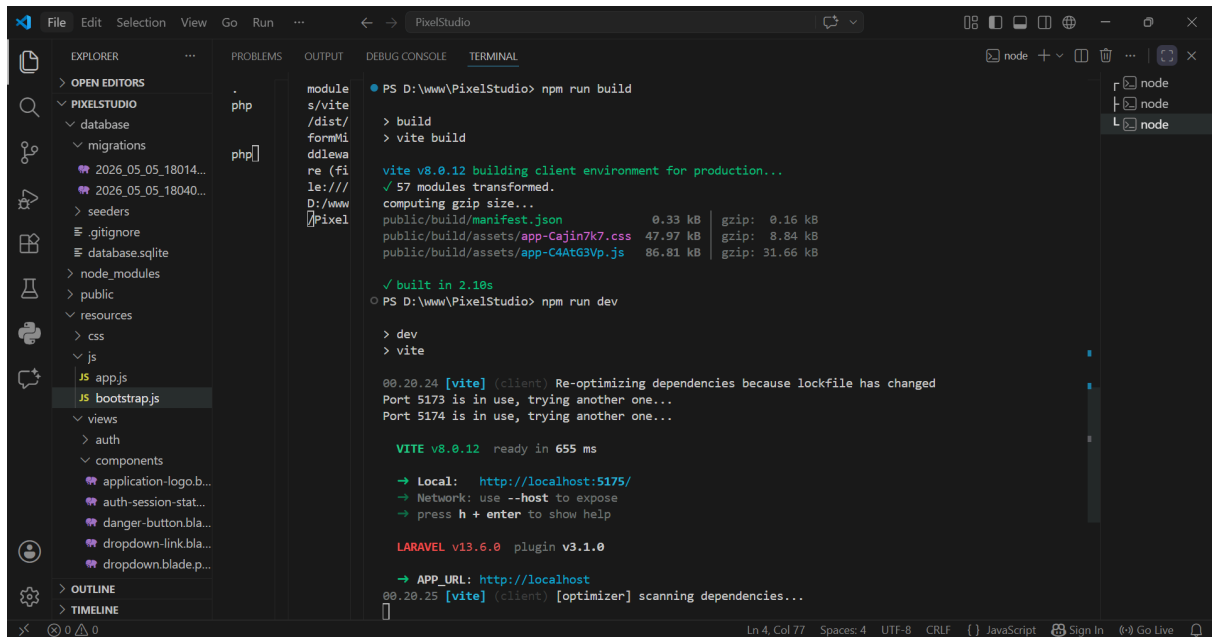

1. Instal Laravel Breeze: `composer require laravel/breeze --dev`, kemudian php artisan `breeze:install blade`

2. Jalankan php artisan migrate untuk membuat tabel users

3. Jalankan npm install && npm run dev untuk build assets

```
PS D:\www\PixelStudio> npm run build

> build
> vite build

vite v8.0.12 building client environment for production...
✓ 57 modules transformed.
computing gzip size...
public/build/manifest.json 0.33 kB | gzip: 0.16 kB
public/build/assets/app-Cajin7k7.css 47.97 kB | gzip: 8.84 kB
public/build/assets/app-C4AtG3Vp.js 86.81 kB | gzip: 31.66 kB

✓ built in 2.10s
PS D:\www\PixelStudio> npm run dev

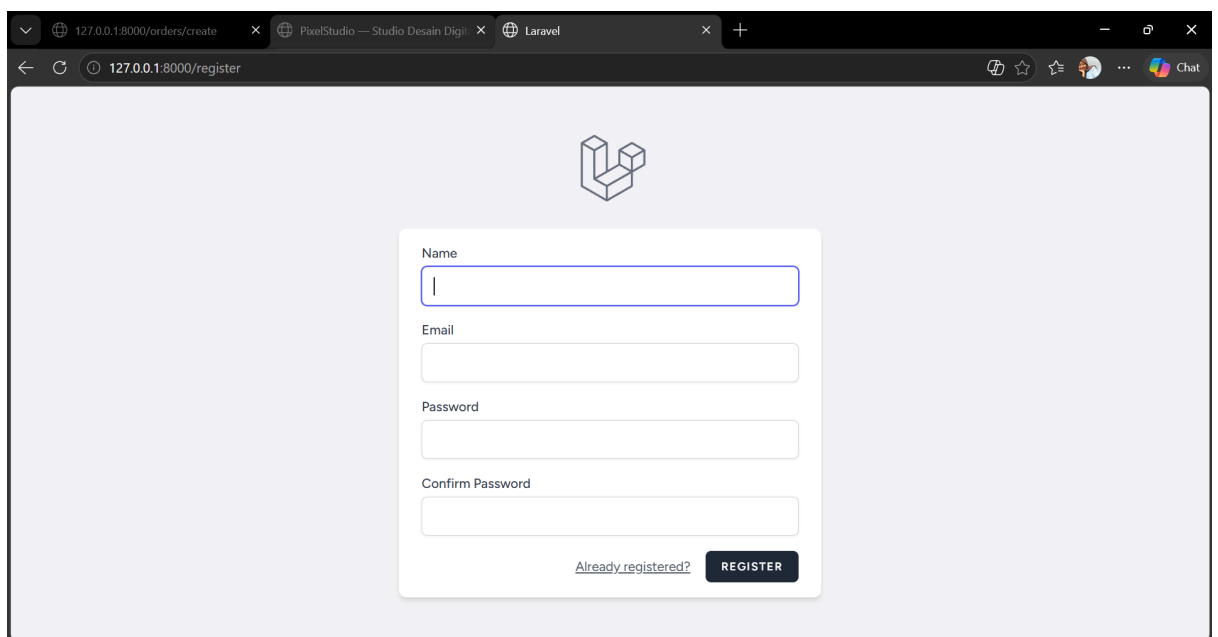

> dev
> vite

00.20.24 [vite] (client) Re-optimizing dependencies because lockfile has changed
Port 5173 is in use, trying another one...
Port 5174 is in use, trying another one...

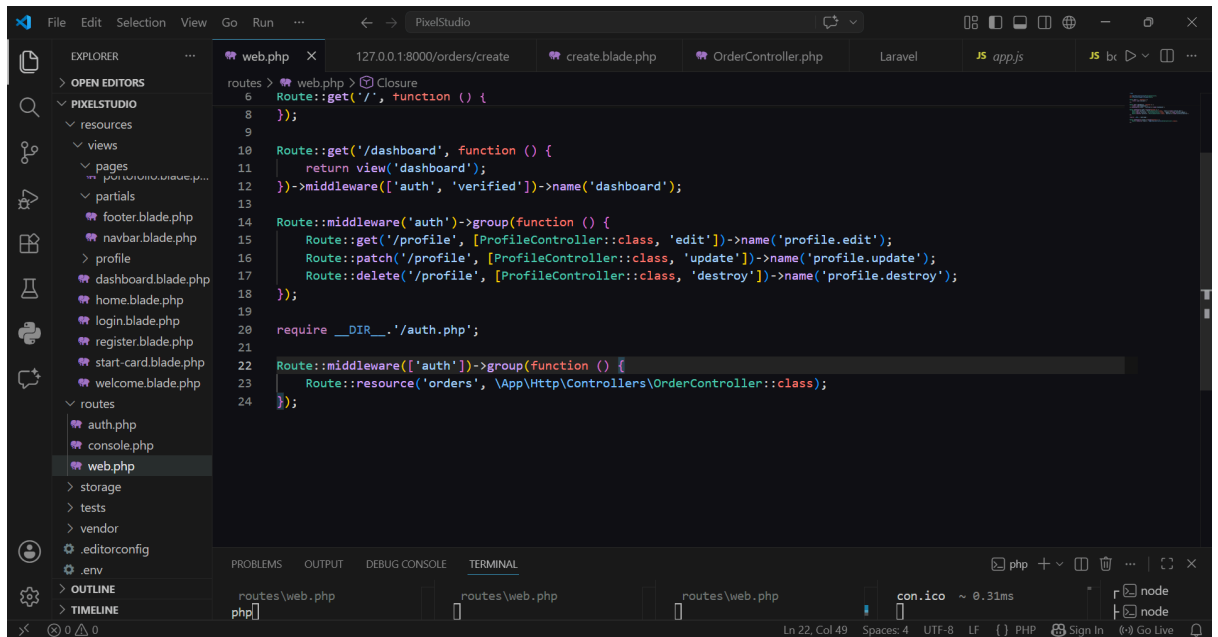

VITE v8.0.12 ready in 655 ms
→ Local: http://localhost:5175/
→ Network: use --host to expose
→ press h + enter to show help

LARAVEL v13.6.0 plugin v3.1.0
→ APP_URL: http://localhost
00.20.25 [vite] (client) [optimizer] scanning dependencies...
```

4. Coba register dan login di <http://127.0.0.1:8000/register>

5. Amankan semua route order dengan middleware auth:
Route::middleware('auth')->resource('order', OrderController::class)

```
routes/web.php
Route::get('/', function () {
});

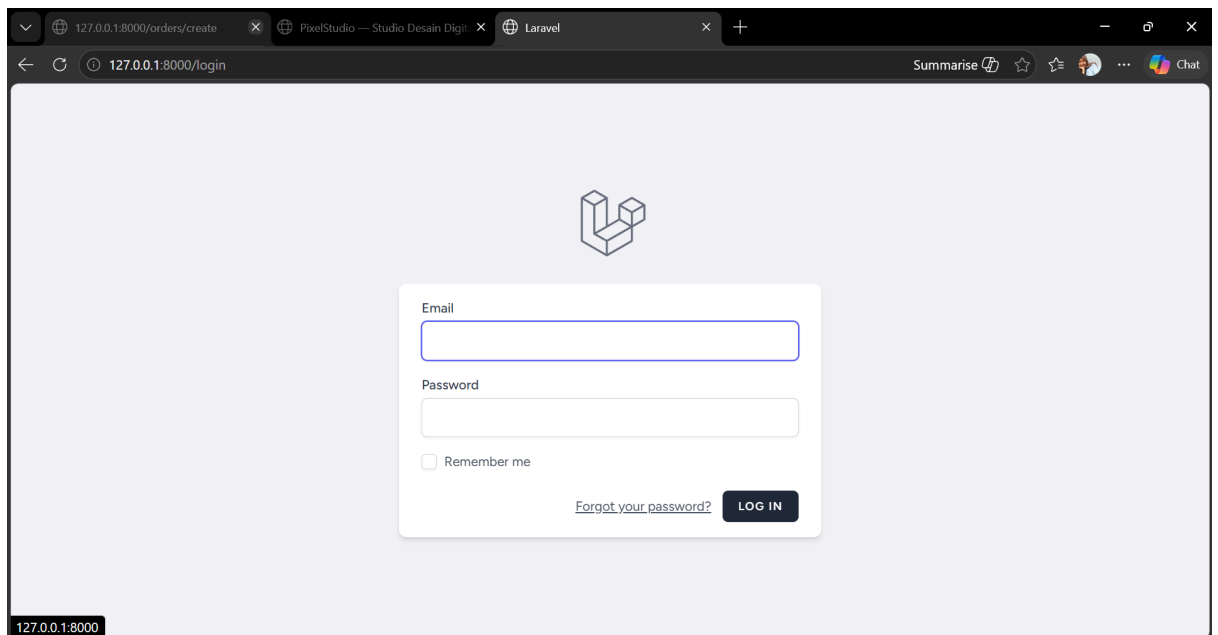

Route::get('/dashboard', function () {
    return view('dashboard');
})->middleware(['auth', 'verified'])->name('dashboard');

Route::middleware('auth')->group(function () {
    Route::get('/profile', [ProfileController::class, 'edit'])->name('profile.edit');
    Route::patch('/profile', [ProfileController::class, 'update'])->name('profile.update');
    Route::delete('/profile', [ProfileController::class, 'destroy'])->name('profile.destroy');
});

require __DIR__.'/auth.php';

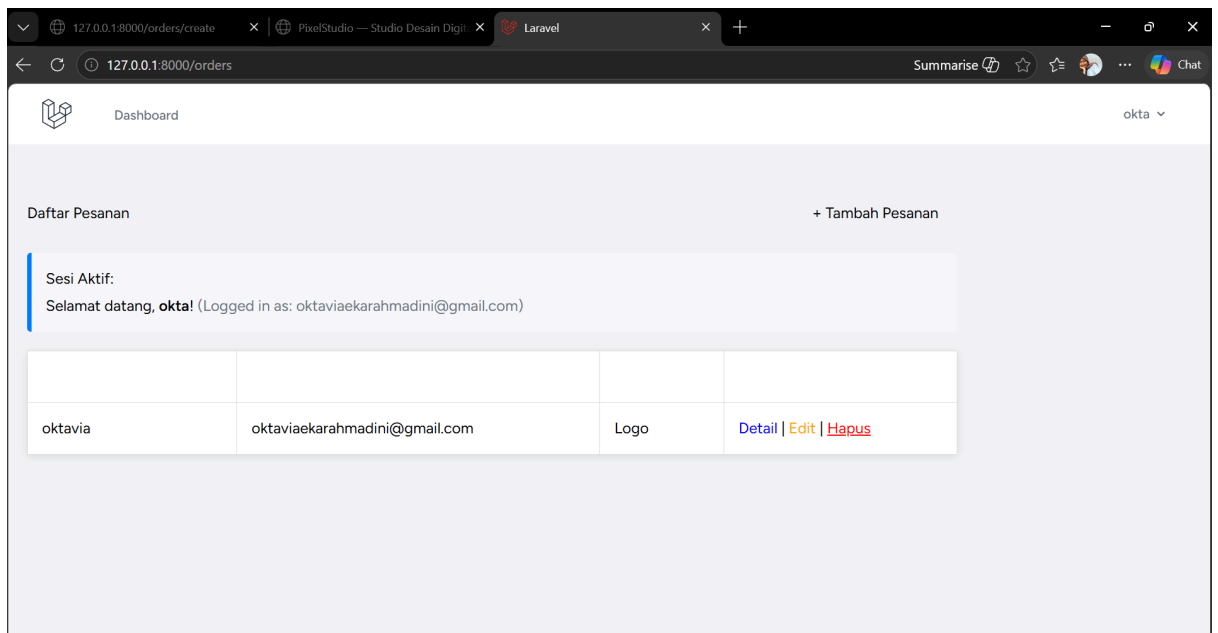

Route::middleware(['auth'])->group(function () {
    Route::resource('orders', \App\Http\Controllers\OrderController::class);
});
```

6. Coba akses /order tanpa login, pastikan diredirect ke halaman login

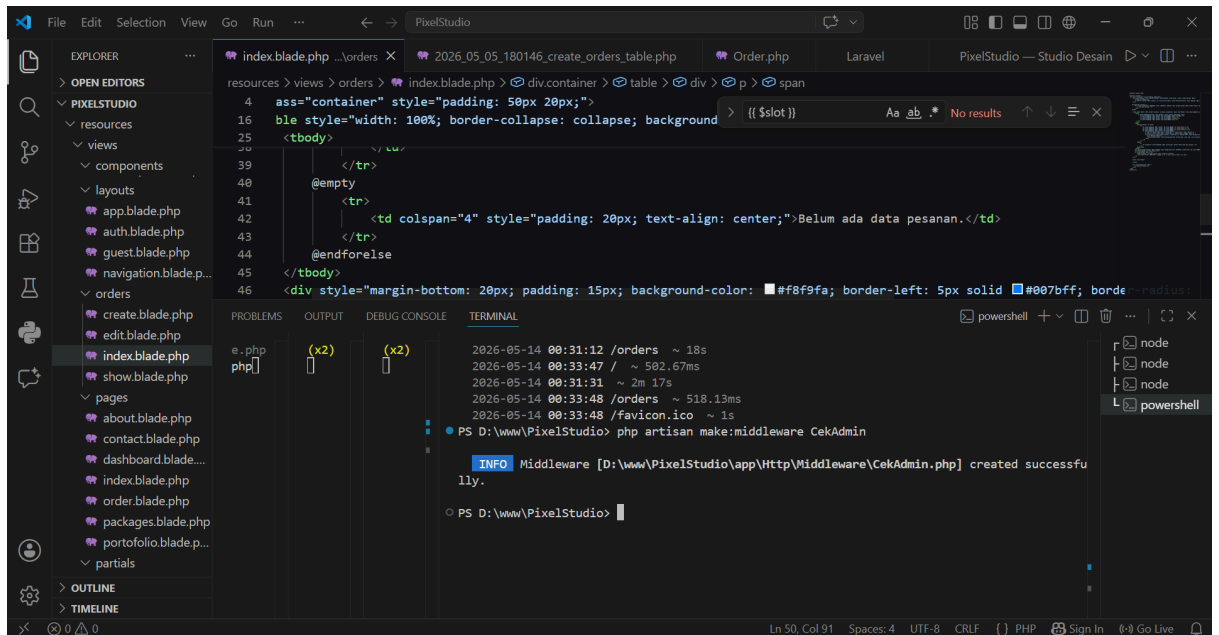

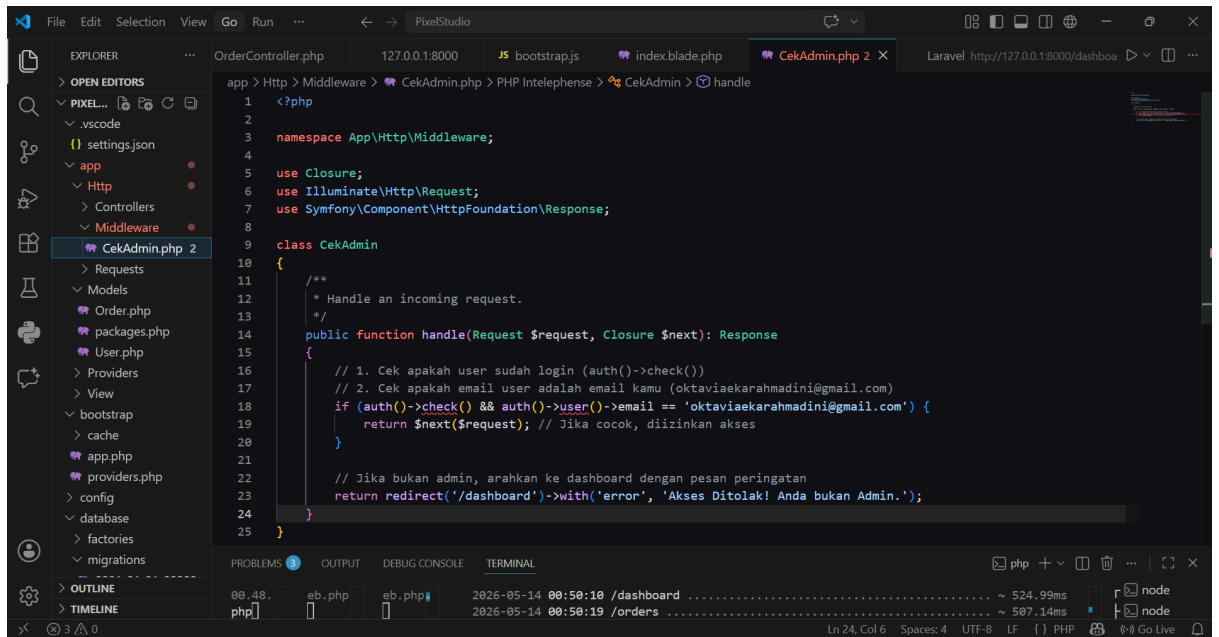

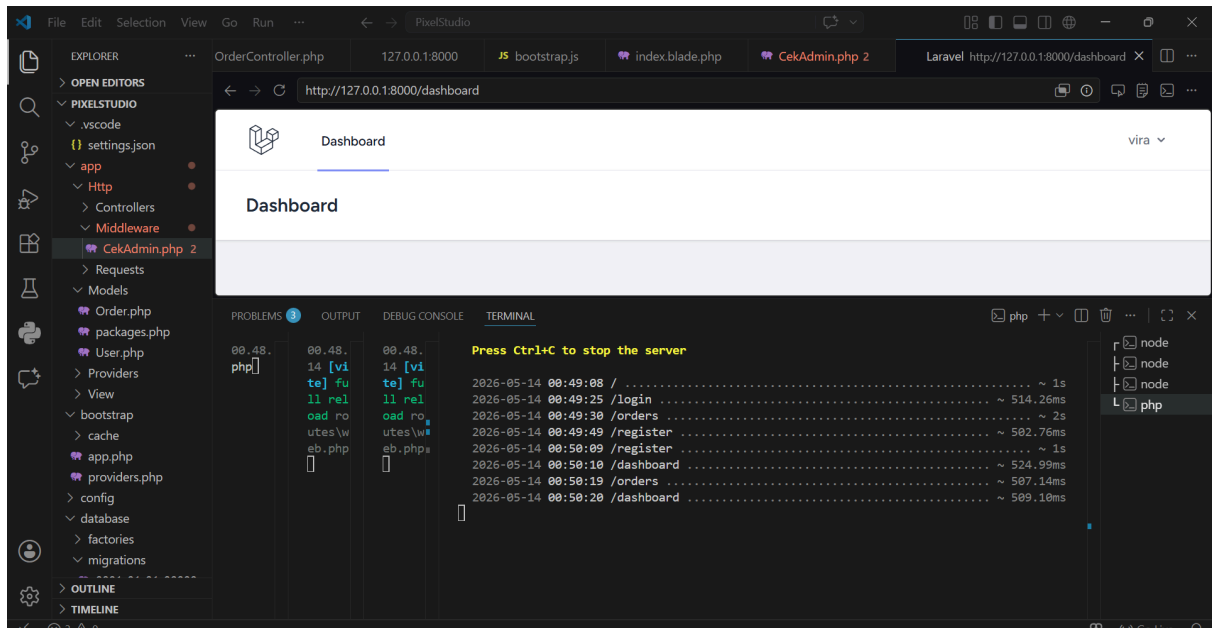

7. Tambahkan nama user di navbar: {{ auth()->user()->name }}

```
resources > views > orders > index.blade.php > div.container > table > div > p > span
4  class="container" style="padding: 50px 20px;"
16  ble style="width: 100%; border-collapse: collapse; background
27  <tbody>
39  </tr>
40  @empty
41  <tr>
42  <td colspan="4" style="padding: 20px; text-align: center;">Belum ada data pesanan.</td>
43  </tr>
44  @endforelse
45  </tbody>
46  <div style="margin-bottom: 20px; padding: 15px; background-color: #f8f9fa; border-left: 5px solid #007bff; border-radius:
47  <h5 style="margin: 0;">Sesi Aktif:</h5>
48  <p style="margin: 5px 0 0 0;">
49  Selamat datang, <strong>{{ Auth::user()->name }}</strong>!
50  <span style="color: #6c757d;">(Logged in as: {{ Auth::user()->email }})</span>
51  </p>
52  <div>
53  <div class="table">
54  <table>
55  <tbody>
56  <tr>
57  <td colspan="4" style="padding: 10px 0 0 0;">
58  <div style="margin-top: 20px;">
59  {{ $orders->links() }}
60  </div>
```

8. Buat custom middleware CekAdmin yang hanya mengizinkan user dengan role 'admin' mengakses route tertentu

9. BONUS: Modifikasi index() Controller agar hanya menampilkan data yang dibuat oleh user yang sedang login
